# SafeScan Quishing Detector

- Run the project on the local URL

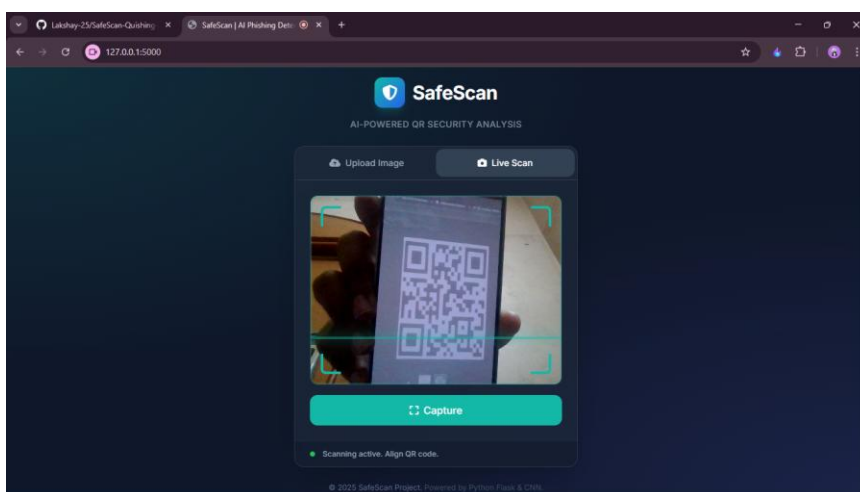

- Drag / Select file from your local machine

- Click on Analyze File and See the Output
  If the QR code contains a Phishing Link, it will analyze it and detect the link with a
  Confidence and Risk score.

- If a safe URL is detected in the QR code, it will detect it and provide confidence and risk score with the QR code and Visit Site button.

- To scan the QR code, switch to Live Scan and show a QR code in the frame, then click on Capture.

- If the QR code link is found to be suspicious, then it will show Suspicious.
